GLASS

METAL MESH

Aesthetics and technology

Metal Mesh Laminate Collection glasses are suitable for shaping various pieces of furniture, partition walls for interiors and glass facades. The structure of the weave, highlighted by a metal layer and further enlivened in the interaction with light, achieves a strong aesthetic impression. With partition walls and doors, depending on the type of metal mesh and its density, greater or lesser transparency of the glass can be achieved, which affects the creation of privacy and intimacy in the space.
